

SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

Invoice Management Module - Iconic Hishab Accounting Software

Prepared for: Iconic Hishab Accounting Software

Prepared date: 14-Sep-2026

Document type: Functional and non-functional requirements specification

Version: 1.0

1. Purpose

=====

This SRS defines the functional, data, security, accounting, reporting, and quality requirements for the Invoice Management module. The module supports invoice creation, draft management, payment collection, refund posting, cancellation, restore-as-draft, print/PDF output, summary reporting, and permission-controlled access.

2. Scope

=====

- Create invoices for customers selected from Particular Accounts, with customer display based on company name/account name.
- Save draft invoices without voucher posting and finalize drafts later with automatic accounting vouchers.
- Maintain date-wise payment history and preserve it during invoice edits.
- Allow due payment collection, payment edit, and refund workflow from the Edit Invoice page; View Invoice remains read-focused with top action buttons.
- Show invoice list with invoice number, customer name, item names, date, total, paid, due, status, and allowed actions.

3. Definitions

=====

Term | Meaning

Draft Invoice | Invoice saved for future editing; no accounting voucher is posted.

Final Invoice | Invoice created/finalized and included in accounting postings and reports.

Initial Paid Amount | Payment captured at invoice create/finalize time.

Payment History | Date-wise records of payments/refunds against an invoice.

Voucher Posting | Automatic creation of Receipt, Journal, Payment, or Reversal voucher entries linked to invoice events.

4. Actors and Roles

=====

Actor/Role | Responsibility

Super Admin | Full module setup, permission assignment, and unrestricted invoice operations.

Authorized Accounting User | Create, update, collect payment, refund, cancel, and report based on assigned permissions and branch access.

Read-only User | View list/details/reports only when Invoice read permission is granted.

Branch Context | Every invoice operation must be scoped by selected branch ID.

5. Functional Requirements

=====

ID | Requirement | Priority

FR-01 | Create a new invoice with customer, dates, items, rate/price, quantity, totals, initial paid amount, and payment account. | High

FR-02 | Validate invoice quantity as a whole number with minimum value 1. | High

FR-03 | Save an invoice as Draft without creating Receipt or Journal voucher. | High

FR-04 | Finalize a Draft invoice and automatically create required vouchers. | High

FR-05 | Automatically calculate subtotal, grand total, paid amount, due amount, and status. | High

FR-06 | Preserve existing payment history when a final invoice item price or quantity is edited. | High

FR-07 | Recalculate invoice status after edit; if paid amount equals new grand total, status becomes PAID. | High

FR-08 | Prevent invalid update where invoice total becomes less than already collected net payments unless refund/adjustment is handled. | High

FR-09 | Collect due payment with account, amount, date, method/reference/note and create linked Receipt voucher. | High

FR-10 | Allow editing payment history entries only for partially paid invoices and recalculate invoice totals. | Medium

FR-11 | Support refund posting with payment account, amount, refund date, and note; refund appears in history and report. | High

FR-12 | Allow invoice cancellation and reverse active accounting postings automatically. | High

FR-13 | Allow cancelled invoices to be restored as Draft with paid/due reset and vouchers removed from active flow. | Medium

FR-14 | Allow permanent delete only for Draft or Cancelled invoices. | High

FR-15 | Provide Invoice Summary Report with date/status filters, totals, paid, refund, due, and status-wise rows. | High

FR-16 | Provide Print/PDF output from details/report pages; list page shall not include Print/PDF buttons. | Medium

FR-17 | Show active menu tick/selection state for all invoice menu items. | Medium

FR-18 | Provide a customer + action near customer dropdown to navigate to/Create Particular Account. | Medium

FR-19 | Enforce Invoice create/read/update/delete permissions and branch permission checks. | High

FR-20 | Record invoice audit logs for create, update, finalize, payment, refund, cancel, restore, delete, and reversal events. | Medium

6. Business Rules

=====

- Invoice statuses are DRAFT, DUE, PARTIALLY_PAID, PAID, OVERDUE, and CANCELLED.
- Draft save creates no voucher; final create/finalize posts vouchers automatically.
- Initial paid amount creates Receipt voucher; remaining due creates Journal voucher.
- Later due collection creates Receipt voucher and a payment history row.
- Refund creates Payment voucher and a refund history row; reports include refund totals.
- Full paid invoices have disabled Edit Invoice button in view page for design consistency.
- Delete is restricted to Draft or Cancelled invoices to protect audit/report history.

7. Data Requirements

=====

Entity | Main Fields | Notes

Invoice | branchId, customerId, invoiceNo, invoiceDate, dueDate, status, totals, paidAmount, dueAmount | Unique by branchId + invoiceNo; indexed by branch/status/date.

InvoiceItem | itemType, name, description, quantity, unitPrice, lineTotal | Quantity whole number in UI/validation; relation cascades with invoice.

InvoicePayment | invoiceId, paymentAccountId, voucherId, amount, paymentDate, method, referenceNo, note | Refund can be represented as method Refund or negative payment amount.

InvoiceVoucher | invoiceId, voucherId, postingType, amount | Posting types include INITIAL_PAID, INITIAL_DUE, COLLECTION, REFUND, REVERSAL.

InvoiceAuditLog | invoiceId, branchId, userId, action, description, data | Maintains operational traceability.

8. Non-functional Requirements

=====

- Security: JWT authentication, role permission, and branch permission checks must be enforced on every API.
- Accuracy: monetary calculations must use decimal precision and avoid stale paid/due/status values.
- Responsiveness: invoice pages must work on desktop, laptop, tablet, and very small mobile views without clipped content.
- Auditability: finalized invoices must remain available for report history except allowed Draft/Cancelled delete cases.
- Performance: list/report queries should use pagination, branch filtering, and indexed status/date fields.

9. Acceptance Criteria

=====

- Users can create, save draft, finalize, edit, cancel, restore draft, delete allowed invoices, collect due payment, edit payment, and refund within permission limits.
- Payment history shows each payment/refund with date, account, method, reference, voucher, amount, and actions only where required.
- Summary report totals match invoice totals, paid amounts, refund amounts, due amounts, and

filtered status counts.

- Print/PDF works from details/report pages and invoice list remains action-focused without Print/PDF.
